A Comparison of Smart Grid Technologies and Progresses in Europe and the USA

Jeudi 21 juin à 14h00
Entrée libre
Amphi I102, Campus de Belfort

This presentation discusses historical and technical events that are aimed at modernizing the electric power grid. The US federal government has ratified the «smart grid initiative» as the official policy for modernizing the electricity grid. European countries are unified in researching and developing related technologies through various structures supported by the European Union. This talk presents the development of smart grids and an analysis of the methodologies, milestones and expected evolutions of grid technologies that will transform society in the near future.
